Toroki Opens Eastern Europe Development Center

*New Facility Represents Significant Expansion in
Professional Services Delivery Capability*

San Jose, CA (October 29, 2007) Toroki announced today the opening of its new Eastern Europe Development Center. Based in Lviv, Ukraine, the new Center adds significant engineering capacity to the organization's Silicon Valley-based team. The Ukraine organization will focus on providing system integration services around Broadcom Corporation's family of Ethernet switching products and FASTPATH® networking software.

"We are very pleased at achieving this important milestone in the growth of Toroki," commented Amir Fuhrmann, CEO and Founder. "I have been very impressed with the high level of academic and professional achievements of the engineers we have recruited in the Ukraine. Their dedication to excellence and strong work habits translate directly to our customers' success. We are thrilled that they are part of the Toroki team."

The Eastern Europe Development Center has been operating since June of this year and has already delivered several projects on time and on budget. The Center will be significantly expanded through the end of 2007 and into next year.

About Toroki

Toroki is a leading provider of engineering services to Network Equipment Manufacturers. The Toroki team has a long and successful track record designing, developing, and deploying leading edge products in the service provider, enterprise, SMB, and wireless markets.
