- Software and Hardware Design
- Test and Validation
- Product Realization
- Maintenance and Support

Communications

The Network Equipment Manufacturer Challenge

The proliferation of IP-based networks - from the enterprise to service providers and into the home - presents special challenges for networking equipment manufacturers. An all-IP landscape encompassing ever-increasing functionality and performance means that manufacturers must continue to develop equipment that complies with the latest industry standards, interoperates seamlessly with other network elements, incorporates advances in software and silicon technology, and reaches their customers in a timely manner.

The picture is not complete without also considering the rapid changes occurring in global workforce demographics. The migration of engineering resources to lower-cost geographies like Eastern Europe and Asia make project management more challenging than ever.

Taken as a whole, it is clear that in order to answer these challenges, manufacturers must consider new approaches to the development of next-generation networking equipment.

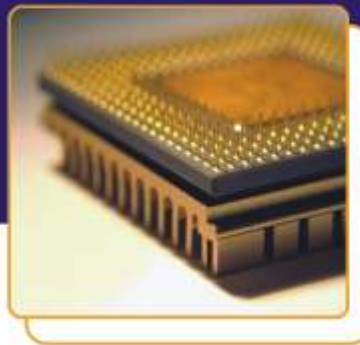

At Toroki Communications, we have answers

Toroki is a systems integration partner to the world's networking equipment manufacturers. With unmatched expertise in communications systems, software, and silicon, we are committed to delivering the highest quality engineering services with the utmost in reliability, responsiveness, and cost-effectiveness.

At Toroki, our vision is

To help drive fundamental advances in the development, deployment, and maintenance of next generation networking equipment

Expertise

Toroki is built on a foundation of expertise and experience in communications system design. Our team has years of experience and a proven track record designing, developing, and deploying leading-edge networking equipment in the data/telecommunications, enterprise, SMB, and wireless LAN markets.

Services Portfolio

Toroki's professional services span the entire product development lifecycle. We can engage on everything from a small, well-defined sub-project to a complete turnkey system where we take on the entire product development function, from requirements definition to mass production.

System Integration

- Firmware and Device Driver Development
- Operating System and Platform Porting
- Custom and Standard Feature Implementation
- Look & Feel Customization

Software and Hardware Design

- Requirements Definition
- Architecture Specification
- Hardware Design and Prototype
- Software Design

Test and Validation

- System Test
- Interoperability Test
- Compliance Test
- Performance Test

Product Realization

- Turnkey Solutions
- Low Volume Prototype Production
- ODM and CM Management

Maintenance and Support

- Worldwide 24/7 Technical Support
- 2nd Tier End User Support
- Regular Maintenance Update Service
- RFC and Standards Tracking

Development and Test Infrastructure

All projects are managed out of our state-of-the-art facility in Silicon Valley and executed in tandem with our offshore teams in Eastern Europe and Israel. Our engineers are equipped with the very latest tools for hardware and software development, source code control, bug tracking, and project management.

To help insure the highest levels of interoperability, our test labs are outfitted with racks of commercial networking equipment from leading vendors such as Cisco, NETGEAR, Alcatel-Lucent, Nokia-Siemens Networks, and others. In addition, we use the very latest equipment from Ixia, Spirent, and Hewlett-Packard for functional, performance, and protocol compliance testing.

Our infrastructure investment enables us to deliver the highest levels of quality, reliability, and responsiveness that our clients rely on for their most critical projects.

Specializing in Broadcom
Software/Hardware Technology

Toroki is Broadcom's Strategic System Integration Partner for the service provider, enterprise, SMB, and wireless LAN market segments. Our relationship with Broadcom affords us access to Broadcom's software and silicon technology, internal resources and product direction. Our unmatched expertise in FASTPATH networking software on Broadcom's line of switching and wireless silicon enables us to directly benefit our clients through reduced cost, faster execution, and lowered risk.
